

# Dinujaya Kavishka

Undergraduate IT Student | AI Specialist

Phone: 0772374441 | Email: kavishkastc@gmail.com

Address: Lakruka Filling Station, Arangala, Naula

## Professional Summary

Highly motivated and passionate IT undergraduate currently specializing in Artificial Intelligence at SLIIT. I possess a strong foundation in software engineering principles, with extensive hands-on experience in developing intelligent systems, full-stack web applications, and complex data-driven solutions. My technical expertise spans across machine learning, deep learning, mobile application development, and IoT system integration. I am eager to contribute to innovative projects that leverage AI to solve complex, real-world challenges, while continuously refining my skills in software architecture, cloud deployment, and advanced data analytics.

## Education

### BSc (Hons) in Information Technology (Specializing in Artificial Intelligence)

Sri Lanka Institute of Information Technology (SLIIT) | 2024 – Present

**GCE Advanced Level** - St. Thomas College, Matale | 2023

*Subjects:* Combined Mathematics, Physics, Information Technology

**GCE Ordinary Level** - St. Thomas College, Matale | 2020

*Subjects:* Mathematics, Science, English, Information Technology, Business Studies, Music, Sinhala, Buddhism, History

## Technical Skills

**Programming:** Python, Java, JavaScript, C++, C Programming

**AI & Machine Learning:** TensorFlow, Scikit-learn, NumPy, Pandas, Neural Networks, Model Training, Classification, Regression

**Web & Mobile:** React, Node.js, Express.js, MongoDB, React Native, Flutter (Basics), PHP, HTML5, CSS3, API Integration

**IoT & Tools:** Arduino, Sensor Integration, Git, GitHub, Docker, Linux, VS Code, Data Visualization, UI/UX Design

## Projects

- Medical Center Management System (AI Enhanced):** Developed a smart hospital management platform featuring AI-based patient prediction algorithms, automated medical report analysis, intelligent summarization, and seamless doctor channeling.
- Student Depression Prediction System (AI/ML):** Built a comprehensive machine learning model that analyzes academic performance, stress indicators, and lifestyle patterns to identify potential depression risks.
- Campus Food Mobile App:** Designed and developed a React Native mobile application for campus-wide food ordering, incorporating real-time menu browsing and order status tracking.
- Movie Rental Platform:** Created a robust web-based movie rental management system with secure user authentication, inventory management, and rental processing using React and Node.js.
- Reality Show Voting Platform:** Engineered a secure, high-concurrency online voting platform for reality shows, featuring real-time results processing using PHP, MySQL, and JavaScript.
- IoT Room Temperature Control System:** Implemented an automated IoT-based environmental monitoring and temperature control solution using Arduino hardware, sensor networks, and custom C-based control logic.
