PROFESSIONAL PROFILE

Information Technology undergraduate at SLIIT specializing in Artificial Intelligence (current CGPA 3.16), who completed GCE A/Levels in the Mathematics stream. Experienced in machine learning, full-stack web development, mobile applications and IoT, and has served as project group leader in the semester group projects of Year 1 S1, Year 2 S1 and Year 3 S1 taking responsibility for coordinating the team and delivering each project.

Also built and launched **magebodima.lk**, a publicly accessible boarding and rental accommodation platform for Sri Lanka. Seeking opportunities to apply machine learning, software engineering and web development to practical problems.

EDUCATION

Bachelor of Science Honours in Information Technology Specialized in Artificial Intelligence | 2024 – Present
Sri Lanka Institute of Information Technology (SLIIT) – Current CGPA: 3.16 (64 credits completed)

GCE Advanced Level (Mathematics Stream) | 2023
St. Thomas College, Matale – Combined Mathematics, Physics, Information Technology

GCE Ordinary Level | 2020
St. Thomas College, Matale

EXTRACURRICULAR ACTIVITIES & SCHOOL INVOLVEMENT

New Inventors' Club: Active member; participated in various invention competitions and exhibitions.

Science Society: Assisted in organizing inter-school science competitions and related activities.

Media Unit: Served as a member of the school media unit.

Sports Activities: Participated in the school's annual sports meet.

TECHNICAL SKILLS

Programming: Python, Java, JavaScript, TypeScript, C++, C, PHP, SQL

Web Development: React, TypeScript, Vite, Tailwind CSS, React Router, Node.js, Express.js, HTML5, CSS3, REST API integration

Backend & Databases: Supabase, PostgreSQL, Row Level Security, SQL migrations, MongoDB, MySQL, Firebase

AI & Machine Learning: TensorFlow, Scikit-learn, neural networks, classification, regression, data preprocessing, model training

Data Analysis: Pandas, NumPy, Matplotlib, exploratory data analysis, data visualization

Mobile Development: React Native, Android Studio, Flutter (basics), UI/UX design

IoT & Embedded Systems: Arduino, sensor integration, embedded C, Raspberry Pi (basics)

Testing & Tools: Vitest, ESLint, Git, GitHub, Docker, Linux, Cloudflare Workers, VS Code

PROJECT EXPERIENCE

MageBodima – Boarding & Rental Accommodation Marketplace (magebodima.lk)

Personal full-stack project | React 19 | TypeScript | Vite | Tailwind CSS | Supabase | PostgreSQL | Cloudflare Workers

- Developed the responsive React and TypeScript frontend with public search, filtering, sorting, pagination and listing pages with photo galleries.
- Implemented username/email authentication with Supabase Auth and an Edge Function, plus role-based routes and advertiser dashboards for creating, editing and managing listings with validated photo uploads.
- Secured data with PostgreSQL Row Level Security, triggers and storage policies, managed through versioned SQL migrations; configured Cloudflare Workers deployment and added Vitest tests.

Apartment Management System – AI Enhanced

Python | AI/ML | Supabase | Web & Mobile Development

Integrated web and mobile applications with AI agents to support apartment operations, with connected workflows for residents and administrators. Responsible for the payment management module: implemented the complete payment and invoice generation flow using Stripe (sandbox) and built an AI chat agent that helps users manage their payments.

Medical Center Management System – AI Enhanced

Python | AI/ML | Node.js | MongoDB

Built a healthcare management platform with AI-based patient prediction, medical report analysis, automated summarization, doctor channeling and appointment handling. Responsible for the admin management module, covering management of doctors, staff and user accounts.

Student Depression Prediction System

Python | Scikit-learn | Pandas | Data Analysis

Developed a machine learning model using academic performance, stress levels, sleep patterns and lifestyle data to estimate depression risk and support early awareness. Responsible for cleaning and preparing the dataset and for training the model.

Campus Food Mobile App – Campus Bites

React Native | Firebase | MongoDB | Node.js

Designed a campus food-ordering app with real-time menu browsing, order placement and order-status tracking. Responsible for the payment management module.

Movie Rental Platform

React | Node.js | Express.js | MongoDB

Created a web application with user authentication, movie inventory management and rental processing. Responsible for movie management within the platform.

Reality Show Voting Platform

PHP | MySQL | JavaScript

Built an online voting platform with secure vote tracking and real-time results for reality shows. Responsible for session management.

IoT Room Temperature Control System

Arduino | Embedded C | Sensors | IoT

Implemented an automated system that monitors room temperature through sensors and regulates the environment using embedded control logic. Built the hardware prototype, wiring the sensor and related components, and completed the project successfully.
